

9 Card Flush

Rules of play

9 Card Flush is a casino table game that is played with a standard deck of 52 cards. Each player receives a 9 card hand which consists of 3 community cards and 6 player cards.

All cards are shuffled before each game either by using a continuous shuffling machine or by a thorough hand shuffle.

Before any cards are dealt, the player must place a wager on the mandatory All 9 bet by wagering an amount on either red or black (but not both), and then he has the option to wager on this same *chosen color* on the 9 Card Bonus, Player 6, and First 3 bets.

After all wagers are placed, 3 community cards are dealt face up. After seeing these 3 cards, each player must choose to fold or make a PLAY wager equal to their mandatory All 9 wager. If a player chooses to fold, the All 9 wager is collected; however, all optional wagers remain in play. After all players make this decision, each player is dealt 6 cards to complete their 9 card hand.

Wagers are then paid according to the respective pay table as outlined below. Only the highest number of flush cards in the player's *chosen color* is awarded.

- **All 9 bet & Play bet:** In the player's 9 card hand, 4 or more flush cards in the player's *chosen color* pays 1 to 1 on both bets, while 3 flush cards pushes both bets. Otherwise, the player loses both bets.
- **9 Card Bonus bet:** In the player's 9 card hand, 4 or more flush cards in the player's *chosen color* pays against a posted pay table. Otherwise, the player loses the bet. [In some pay tables, 5 or more flush cards in the player's *chosen color* wins and 4 or less flush cards loses.]
- **Player 6 bet:** In the player's 6 cards, 4 or more flush cards in the player's *chosen color* pays 3 to 1, while 3 flush cards pays 2 to 1. Otherwise, the player loses the bet.
- **First 3 bet:** In the 3 community cards, 3 flush cards in the player's *chosen color* pays 5 to 1, while 2 flush cards in the player's *chosen color* pays 2 to 1. Otherwise, the player loses the bet. [Two alternate pay tables pay 4 to 1, or 3 to 1, respectively, for 3 flush cards.]
